PROFESSIONAL EXPERIENCE

Software Developer

03/2026 – Present | Divinópolis

CartSys

- Cut fee calculation time for 1,608 records by 25% (from 7m20s to 5m30s) by removing N+1 queries with batch loading and tuning Entity Framework's ChangeTracker.
- Automated the full bank billing cycle by integrating the system with Unicred's REST API: issuing, querying, settling, paying, rescheduling and batch-printing bank slips, with token authentication and HTTP failure handling.
- Enabled operation on a cloud-hosted SQL Server over VPN. Rewrote critical batch routines (notices, protests, blocks) with reference data caching, grouped audit logs and multi-row inserts, cutting database round trips without changing results.
- Allowed registry offices to adopt electronic ledgers by implementing digital signing of books: PDF/A, SHA-256 hashing and CMS signatures with a digital certificate, individually, in batches and automatically.
- Eliminated manual database fixes by repairing the synchronization of electronic service invoices (NFS-e) with municipal and national providers, reconciling authorized invoices without reissuing them.
- Delivered the unified report for Brazil's National Council of Justice (CNJ) combining SQL Server and Firebird, plus traceability histories of CRA/CENPROT submissions with Excel export.

Tech stack: C#, .NET Framework 4.8, WinForms, DevExpress, Entity Framework, LINQ, SQL Server, Firebird, REST APIs, JSON, iTextSharp, FastReport, SVN.

Systems Developer

05/2023 – 03/2026 | Divinópolis

Condomig

- Cut response time by 75% (40s → 10s) in the engineering module of a legacy VB6 system through database normalization, new indexes and rewritten MySQL queries.
- Automated the printing and industrial control workflow with .NET Framework 4.8, WinForms and Entity Framework on MySQL, removing manual steps.
- Built in .NET 8 the processing of iPonto time-clock reports with EPPlus, applying the attendance rules to the meal allowance calculation and eliminating manual checks.
- Reduced material waste by more than 10% with per-machine BI dashboards, integrating MySQL and Progress (Datasul) into QlikView and Grafeno.

Tech stack: C#, .NET Framework 4.8, .NET 8, WinForms, Entity Framework / EF Core, MySQL, Progress (Datasul), EPPlus, Docker, Git.

.NET Developer

07/2022 – 02/2023 | Divinópolis

Petrarca Software

- Built new modules for the management system in C# with WPF (MVVM), Entity Framework and SQL Server.
- Ported critical libraries from VB.NET to C# and rebuilt the management reports with Crystal Reports.

Tech stack: C#, .NET Framework 4.5.2, SQL Server, WPF, WinForms, VB.NET, MVVM, Crystal Reports, Bitbucket.

EDUCATION

Bachelor's in Computer Science

01/2023 – 07/2026 | Divinópolis

Anhanguera Pitágoras

Focus on Algorithms and Data Structures, Software Engineering, Distributed Systems, Data Modeling, Databases, Operating Systems, Cloud Computing and Information Security.

SKILLS

Languages and frameworks: C#, .NET Framework, .NET 8, Entity Framework / EF Core, LINQ, WinForms, DevExpress, WPF, VB.NET, VB6

Databases: SQL Server, MySQL, Firebird, Progress (Datasul)

Architecture and integrations: REST APIs, JSON, layered architecture, Repository Pattern, MVC, MVVM, MVP

Tools: Git, GitHub, SVN, Bitbucket, Docker, CI/CD

LANGUAGES

Portuguese: native · **English:** intermediate
